About Ryuza Security

Our commitment to cybersecurity research enables us to develop advanced security solutions, methodologies, and next-generation offensive capabilities.

At Ryuza Security, research is the foundation of everything we do. We specialize in offensive cybersecurity research and development, focusing on Red Teaming, Psychological Operations (PsyOps), adversary emulation, vulnerability research, and next-generation security technologies.

Our mission is to transform research into practical cybersecurity innovations that strengthen resilience and shape the future of offensive security.

RYUZA RED OPS

Ryuza Red Ops is specialized division of **Ryuza Security** in advanced **Red Teaming Operations** and VAPT engagements, employing deceptive tradecraft, adversary emulation, and offensive security techniques to compromise target environments and uncover critical security weaknesses before real attackers can exploit them.

"THE MOST DANGEROUS ATTACK IS THE ONE YOU NEVER ANTICIPATED. RED TEAMING EXISTS TO FIND IT FIRST."

The following are key activities conducted as part of Red Teaming Operations:

- Supply Chain & Third-Party Attacks
- Malware & Persistence Techniques
- Cloud & Modern Environment Attacks
- Access Control Compromise
- Deepfake-Based Social Engineering
- APT-Style Operations

RYUZA LABS

Ryuza Labs is a dedicated division of **Ryuza Security** focused on conducting advanced cybersecurity research and technical security analysis.

The division is committed to studying emerging threats, investigating vulnerabilities, analyzing attack techniques, and developing research-driven security methodologies to better understand the evolving cyber landscape.

“FUNDING A POWERFUL RESEARCH TODAY BUILDS STRONGER SECURITY FOR TOMORROW.”

The following are key activities conducted as part of Cybersecurity Research:

- Exploit Research (Zero Days)
- **Innovation & IP Development**
- AI & ML Model Development for Cybersecurity
- Reverse Engineering
- Security Tool & Framework Development
- Cryptography & Encryption
